

Estimating next year's refund (or balance due) is a smart choice that can help you reach your goals. Here are some ideas to help you make **smart choices** about...

TAX PLANNING

Estimating next year's refund can help you:

- Make sure you *won't have to pay* when you file your taxes.
- *Be ready* for your refund to go up or down.
- See if you can *increase your take-home pay this year*.

You can start by checking your withholding.

- One quick way: go to www.irs.gov.
- Use the “IRS Withholding Calculator”
- Follow the instructions to find out:
 - An estimate of your refund.
 - How to change your withholding.

Use last year's tax return as a guide.
Are changes coming *this year* that could make your refund go...

Down?

- A child reaching age 19 (24 if a full-time student) can stop the Earned Income Credit.
- A child reaching age 17 stops the \$1,000 Child Tax Credit.
- New income with no taxes taken out such as unemployment insurance or lottery winnings can cause taxes to go up.

Up?

- A new child coming into your household can increase your Earned Income Credit.
- A new child under age 17 can qualify for the \$1,000 Child Tax Credit.
- Credits for college costs, retirement savings, or childcare expense can lower tax.

When you see what's coming, you have more choices!

CAUTION: There are many “moving parts” to a tax return. No estimate is perfect, so be conservative! Estimate your refund on the “low side.” That way, whatever happens is likely to be better than you expected!
